

Final Report for Team: No Free Lunch

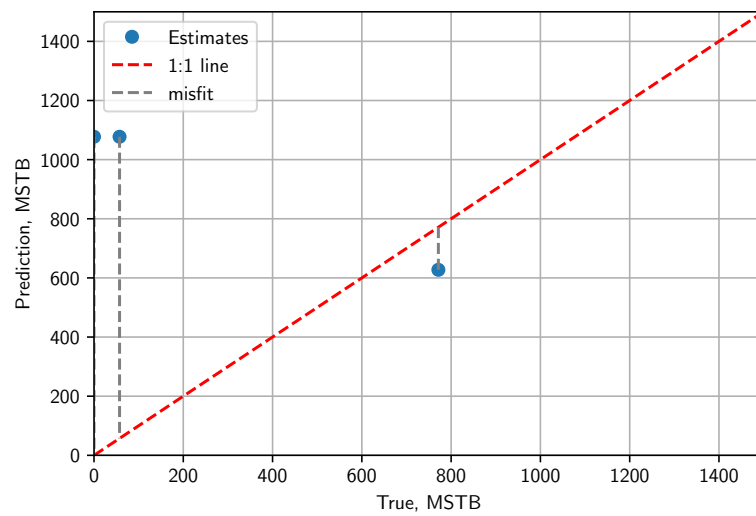

Figure 1: Accuracy.

Fig 1 shows your team's predictions compared to the actual production values at 2 years. The mean absolute percentage error with respect to the true values is 359141.33618. The total field production for your well locations is 35673663.665.

Presentation comments

- nan
- Assumptions and workflow was very well presented.
- Good explanations for imputations and Viz of plots. Collinearity explanation was clear. Plotting of each steps before and after we're clear and useful.
- Energy and humor on the summary. Great explanation of model selection and validation.
