# Final Report for Team: kuo-bits

Figure 1: Accuracy.

Fig 1 shows your team's predictions compared to the normalized fuel consumption values. The mean absolute percentage error with respect to the true values is 0.192. Each fuel type is normalized independently such that its max/min values are scaled to the interval $(0, 1)$
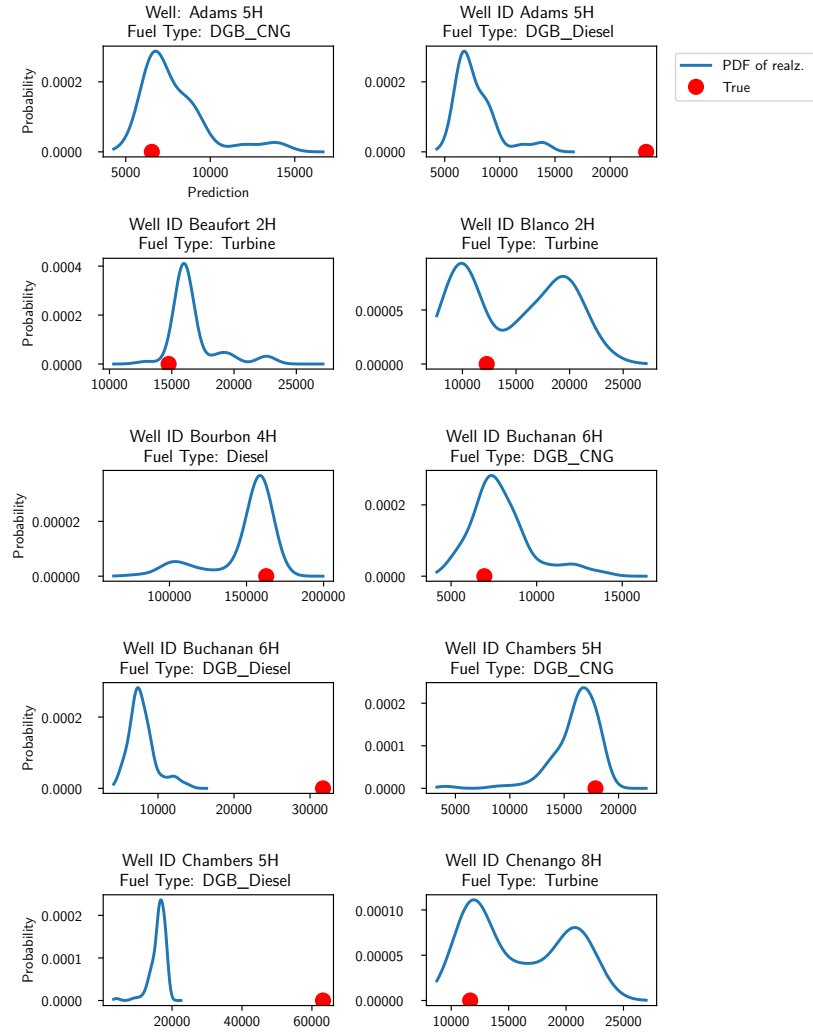

Figure 2: Uncertainty distributions and true values.

Fig 3 shows your team's uncertainty model and actual values for 10 of the predictions.
Figure 3: Goodness Score Plot.

Fig 3 shows your team's goodness score plot for the 50 wells. Your final goodness score is 0.74.

Presentation comments

- Did well considering no PGE students. Generally, my bias is for teams that have one model vs many. It is more maintainable.

- nan

- nan

- Clear explanation of workflow and usage of graphics to present workflow process; interesting choice of spider plot; presentation was dominated by single team member

- One team member did all of the presentation

- Approach was interesting not sure sufficient profess was made in presenting solution
