# Final Report for Team: ForHire

Figure 1: Accuracy.

Fig 1 shows your team's predictions compared to the normalized fuel consumption values. The mean absolute percentage error with respect to the true values is 0.264. Each fuel type is normalized independently such that its max/min values are scaled to the interval $(0, 1)$
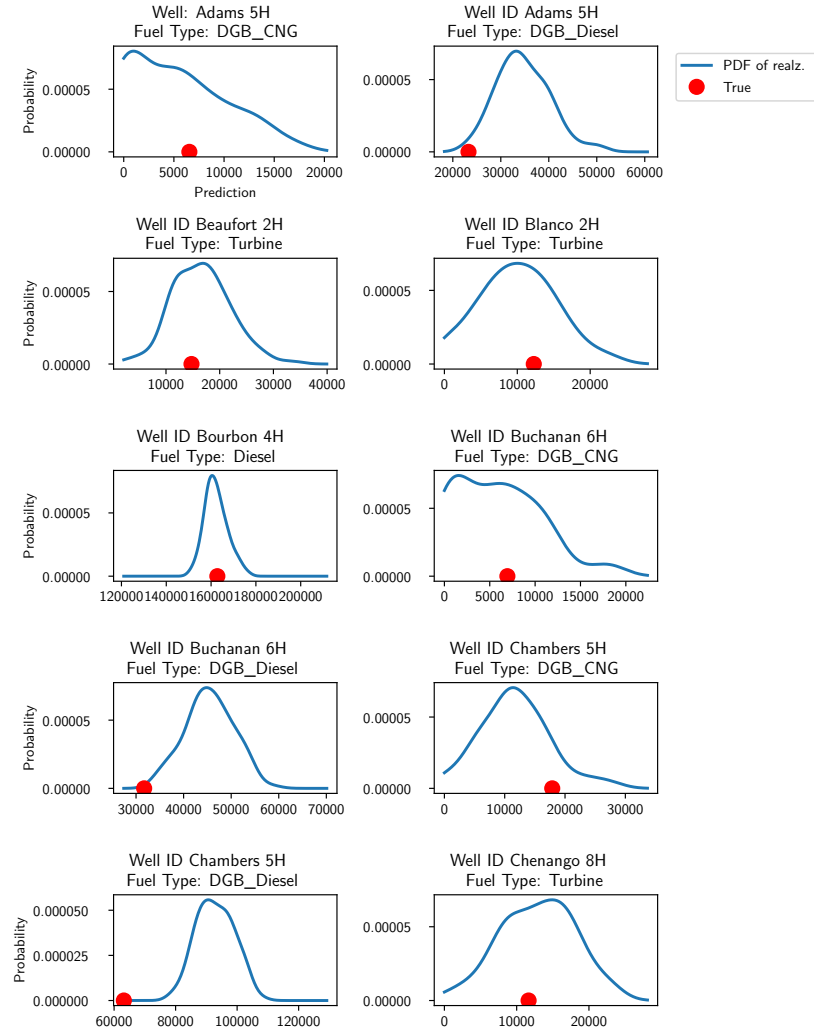

Figure 2: Uncertainty distributions and true values.

Fig 3 shows your team's uncertainty model and actual values for 10 of the predictions.
Figure 3: Goodness Score Plot.

Fig 3 shows your team's goodness score plot for the 50 wells. Your final goodness score is 0.568.

Presentation comments

- nan

- Good use of flowchart to represent problem workflow - makes clearer; coefficient heatmap for feature selection is very hard to read; very difficult to read/see tables on presentation; went over time +6 minutes

- Executive summary shows conclusions vs. workflow. Some visualizations lacked formatting or were difficult to read.

- nan

- Good name. Cake!

- hands in pockets? :) reconstitute data values good - made strong point about considering different model approaches depending on data
