Final Report for Team: GooglyEyes

Using the following scoring metric

$$\text{score} = 2\left(\text{accuracy} - \frac{1}{2}\right)$$

Your teams score was 0.050000000000000044.

Presentation comments

- nan

- Skipped the executive summary. Identified which pumps were missing specific data. Used a polynomial regression. Sliding window approach. Didn't separate out k-fold datasets. Could use more viz on results, better explanation of model.

- Good workflow slide & data & model discussion. Great job guys

- Really liked the simply described workflow, recognized that filling poor data was not a good use of their time. , in presentation spent a too much time explaining

- good EDA Random Forest -again whats the logic behind utilizing it
