# Final Report for Team: One2Tree

Figure 1: Accuracy.

Fig 1 shows your team's predictions compared to the normalized fuel consumption values. The mean absolute percentage error with respect to the true values is 0.128. Each fuel type is normalized independently such that its max/min values are scaled to the interval $(0, 1)$
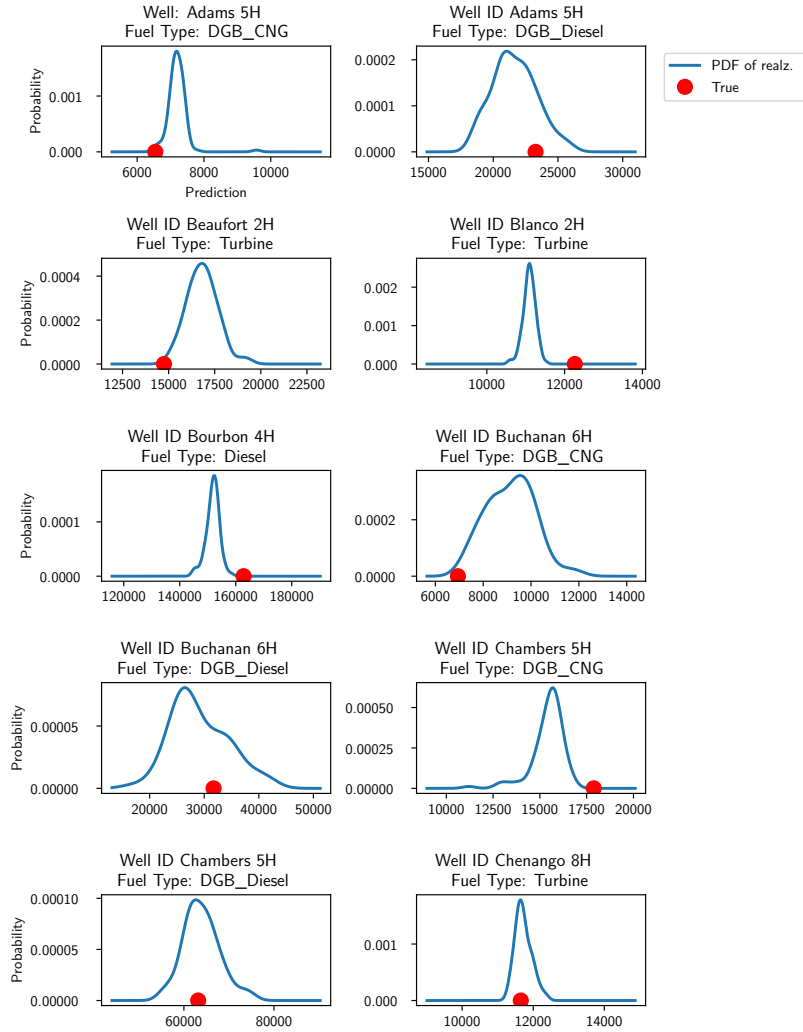

Figure 2: Uncertainty distributions and true values.

Fig 3 shows your team's uncertainty model and actual values for 10 of the predictions.
Figure 3: Goodness Score Plot.

Fig 3 shows your team's goodness score plot for the 50 wells. Your final goodness score is 0.47.

Presentation comments

- nan

- Good feature selection. I had trouble understanding imputation.

- nan

- Good graphic Fig 1.

- Summary was very minimal. Workflow was not clear - made understanding overall presentation much more difficult. Excellent use of graphics to help visual usage of data. Over 5 minute timeframe.

- diagrams good method for consolidation cng and diesel fuel good
